ShopSphere – Sales Performance Dashboard: Business Insights

1. Objective

The objective of this project is to analyse ShopSphere's e-commerce sales data using Power BI. The dashboard helps understand overall sales, product performance, customer payment preferences, monthly trends, and regional performance.

2. Key Business Insights

Insight 1: Overall Sales Performance

Observation: The dashboard shows ₹13.90 million in net revenue, 772 total orders, approximately 2K units sold, and an average order value of ₹18K.

Business Interpretation: These KPIs indicate the overall sales performance and customer purchasing activity.

Recommendation: Introduce product bundles and special offers to encourage customers to purchase more products and increase sales.

Insight 2: Product Category Performance

Observation: The dashboard compares revenue across six categories: Electronics, Home & Kitchen, Beauty, Fashion, Sports, and Books.

Business Interpretation: Comparing these categories helps the business understand how different product segments contribute to revenue.

Recommendation: Focus on popular product categories and introduce targeted promotions to improve sales in other categories.

Insight 3: Monthly Sales Trends

Observation: The line chart shows frequent changes in revenue between 2025 and 2026, with some noticeable peaks.

Business Interpretation: These fluctuations indicate changes in sales activity over time and may be influenced by customer demand or promotional campaigns.

Recommendation: Identify the reasons for revenue peaks and declines, and plan marketing campaigns during periods of lower sales.

Insight 4: Customer Payment Preferences

Observation: UPI is the most frequently used payment method, with 288 orders (37.31%), followed by credit cards with 178 orders (23.06%).

Business Interpretation: Customers show a preference for UPI payments, indicating the importance of convenient digital payment options.

Recommendation: Ensure smooth UPI transactions, continue offering multiple payment methods, and introduce suitable digital payment offers.

Insight 5: Regional and Product Profitability

Observation: The map displays sales activity across different cities, while the product table provides details about product revenue, units sold, and gross profit.

Business Interpretation: These visuals help identify important sales locations and understand which products contribute to business profitability.

Recommendation: Focus on cities with strong sales potential and promote products that generate higher profits. Review product costs and discounts to improve profitability.
