Platform details Info
Provide platform information that Elastic Beanstalk needs to create an environment.
Platform
Python
Platform branch
Python 3.14 running on 64bit Amazon Linux 2023
Platform version
4.13.11 (Recommended)
Application code Info
Choose how to deploy this application.
Sample app
Hello world!
Existing version
No versions available for this application.
Local file
Upload a file from your local machine.
S3 URI
S3 object containing your application code.
Environment properties Info
Pass environment variables to your application as key-value pairs. Platform default variables can only have their values changed. They cannot be renamed or removed.
Add environment properties
Environment tier Info
Choose whether the environment serves HTTP requests or runs background work.
Web server environment
Run a website, web application, or web API that serves HTTP requests.
Worker environment
Run a worker application that processes long-running workloads on demand or performs tasks on a schedule.
Environment type Info
For web server environments, choose a single instance or a load-balanced, scalable environment.
Single instance
A single-instance environment contains one Amazon EC2 instance with an Elastic IP address.
Load balanced
A load-balanced and scalable environment uses the Elastic Load Balancing and Amazon EC2 Auto Scaling services to provision the Amazon EC2 instances that are required for your deployed application.
Platform-specific options - optional
Service access - optional

us-east-2.console.aws.amazon.com/elasticbeanstalk/environments/e-mfgyujmiak/clone?region=us-east-2
Elastic Beanstalk > Environments > blue-env > Clone environment
Clone environment Info
You can launch a new environment based on an existing environment's configuration settings while optionally choosing a different platform version for the new environment. Learn more
Original environment
Environment name:
blue-env
Environment domain:
blue-env.eba-f4amj3cp.us-east-2.elasticbeanstalk.com
Platform:
Python 3.14 running on 64bit Amazon Linux 2023/4.13.11
New environment
Before cloning your environment, check your environment's stack drift status in CloudFormation.
Out of sync changes will not be carried over to the cloned environment. For critical resources, like ingress security groups, you may need to reestablish them in the cloned environment. Learn more
Detect stack drift
Environment name | Info
green-env
Must be 4-40 characters. Letters, numbers, and hyphens are allowed. Cannot start or end with a hyphen.
Domain name prefix - optional | Info
Optionally specify a unique domain name prefix. A default will be provided.
Leave blank for autogenerated value
Must be 4-63 characters. Letters, numbers, and hyphens are allowed. Cannot start or end with a hyphen.

us-east-2.console.aws.amazon.com/elasticbeanstalk/environments/e-wjvxcappey/swap-domain?region=us-east-2
Elastic Beanstalk > Environments > green-environment > Swap domain
Environment update successfully completed.
Swap environment domain Info
When you swap an environment's domain with another environment's domain, you can deploy versions with no downtime. Learn more
Swapping the environment domain will modify the Route 53 DNS configuration, which may take a few minutes. Your application will continue to run while the changes are propagated.
Environment domain swap
Environment
Environment:
green-environment (e-wjvxcappey)
Environment domain:
susmitha-green-env.us-east-2.elasticbeanstalk.com
Environment domain to swap
Traffic will be redirected to the domain of the chosen environment
